

CONING OIL PUMP

This range of CM tec motor-pumps is specifically designed for the transfer of coning oils, used in the textile industry.

These fibre-lubrication motor-pumps are mounted in units to supply machines treating nylon thread for the spinning of synthetic fibres. There may be up to 10 spinning modules on the same machine.

These are motor-driven positive-displacement pumps made of special stainless materials: stainless steel, and crystalline polyester for the pump and duralinox and PVC for the bearers.

Flow from 1 up to 200 liter/hour

These pumps are fitted with :

- . motor-reduction
- . crystalline polyester body-pump
- . option : dosage system
